

Landforce tractor – a force like no other

The Landini Landforce 125 tractor is a great value general farming and contracting workhorse, with the features and performance for a wide range of jobs but without the modern complications. Whether for hay or silage, baling, spraying, cultivation or planting, or materials handling with its front-end loader, the Landini Landforce 125 has what it takes to tackle the task without hurting the wallet.

Massive torque and power

The Landforce tractor is a force like no other. Let's start with its high performance 4.5 litre FPT Tier-3 engine giving a massive 515 Nm of torque and a 180 litre tank for long hours in the field. The engine is smooth and torquey and loves to work hard. And all this without the complication of AdBlue®.

The power-shuttle and HML 3 speed change on the move power-shift driveline has 36 forward speeds so you can find the right speed for every job. The Landforce gets the power to the ground through generous rubber with 600/65R34 rear and 480/65R24 tyres. The Landforce looks the part and gets the job done.

At 4,550 kg, the Landforce is also no lightweight for traction to get that power to the ground for towing or for handling heavy implements.

The 40 km/h top speed is great for getting to the job or those on-road towing tasks. The power-shuttle has easy in-cab modulation so that you can make the shuttle more aggressive for repetitive simple loader tasks or frequent headland turns.

Lots of fruit at the back-end

The back-end of the tractor has all the fruit. The linkage has quick coupling hook ends and fender controls on both sides for easy implement changes and hooking up. The linkage has a 4,500 kg lift capacity to handle mowers, rotary hoes, sprayers and cultivation tools. The electronic linkage gives simple finger-tip raise-lower control

with full draft control when needed. The PTO is dual 540/1000 speed and is electro-hydraulically engaged through a multi-disc oil-bath clutch pack.

But it is the hydraulics bundle that sets this value package apart. The load-sensing closed-centre hydraulic pump delivers 113 litres/minute for the remotes, while an independent gear pump delivers 38 l/m for the steering and transmission services. The tractor has 3 rear remotes and one is configured with flow control for hydraulic motor operation.

The high-flow hydraulics deliver exceptional loader cycle times, while the joy-stick control of the loader is independent of the rear remotes. The quick-detach level-lift loader has a Euro-hitch implement attachment, hydraulic-soft ride accumulators and great visibility over the Landforce sloping bonnet.

Comfortable ride

Operator comfort is also well covered with generous cabin size, flat floor and wide-open access. The deluxe swivel air suspension seat provides comfort for long hours, while the tilt and telescopic steering wheel gives the flexibility to accommodate every operator to reduce fatigue and maintain productivity. The integrated instructor seat provides further comfort when a second person is on board.

Great value pricing and in stock now

The Landini Landforce 125 with loader is available ex-stock and offers great value at \$106,000 inc GST. With the recently devalued Australian dollar, this pricing will not be enjoyed for long and the Government's recently announced Instant Asset Write-off is a great incentive to invest in this tractor as your next workhorse. Inlon Finance also offers quick approval no-deposit finance making now the easiest time to grab this value package.
